

Brush Chipper Model C13

MADE IN
NEW ZEALAND

The Hansa C13 is designed to fill the gap between the smaller domestic garden shredders and the larger commercial chippers.

The ideal machine for lifestyle block owners, garden maintenance contractors, orchards, nurseries, farms, hire centres, school grounds and parks.

The large inlet chute eliminates the need for precutting, feeding in bundles of brushy and twiggy materials, vines and branches with ease.

As with all Hansa chippers, the C13 has a very efficient self feeding action, resulting in a user friendly machine easy on the operator.

The inertia generated by the large rotor disk creates enough momentum to keep cutting as well as giving the machine enough draught to discharge and deflect the mulch up to 8m away.

Model C13 is available in three options, either petrol powered or tractor mounted PTO driven. The petrol powered machines have the option of being either towable around your lifestyle block or road towable with mudguards and LED lights.

FEATURES

- One in feed chute with large opening at convenient operating height
- Quality engine - Honda 4 stroke petrol GX390
- Self-feeding action, capacity of 90mm
- Solid housing construction of 5mm steel plate
- Easy starting with manual clutch and twin belt drive
- 1.2m high discharge into trailer, wheelbarrow or stockpile
- Quality hyperloc powder-coated finish
- 12 month warranty, conditions apply

The best chippers for any application.

CHIPPERS

Brush Chipper Model C13

Organic waste from the garden, orchard or farm is too precious to burn or dump. These materials processed into mulch with a Hansa Chipper will produce the finest organic fertiliser in the form of compost in a matter of weeks. You will not only be conserving your environment by recycling otherwise unwanted organic waste without burning, but you will be saving transporting and dumping costs and returning to the soil all the

valuable nutrients which originated from it. Wood chip mulch is excellent for use in gardens to reduce the growth of weeds and retain moisture in the soil. The output is of a fine and even texture with a chip size of 10 to 15mm. This disk type brush Chipper will offer you unrivalled speed of operation, a machine you will love to use.

OPTIONS AVAILABLE

Standard machine with towbar for towing on your property or leg mounting.

Road trailer version, complete with mud-guards, lights and coupling, for towing on highways. The ideal option for hire centres and contractors or if you have more than one property.

Tractor mounted PTO driven, suitable for any small tractor with 12 to 35HP. Connected to the three point linkage of your tractor. Designed for PTO speed of 540 rpm. Drive shaft is fitted with shear pin.

CONSTRUCTION

- Housing built of solid 5mm steel plate.
- Twin belt drive between engine and rotor for smooth running and protection of your engine or tractor against shock loads.
- Easy starting – you start the engine and then engage the drive with a manual clutch (petrol option only).
- The two cutting blades shear the material against an adjustable hardened counterknife, or anvil. This action will work just as efficiently in 10 years time as on the first day, provided the knives are kept sharp.

CONVINCING FEATURES

No pre-cutting necessary, branches of this size flow into the machine by themselves.

Below: Typical output size.

Easy access to knives and clearing of housing, a few turns of the wingnut and everything is accessible within seconds.

SPECIFICATIONS	Weight (kg)	Height (mm)	Width (mm)	Length (mm)	Approx. Capacity*
Standard Model with 13HP (max) Honda engine	150	1400	1000	1100	80-90mm branches
Trailer Model with 13HP (max) Honda engine	200	1550	1200	2700	80-90mm branches
PTO Model	150	1500	900	1100	80-90mm branches

* depending on the type and hardness of the wood

When you compare different makes of machines, be aware, as some manufacturers rate their capacity by the size of the opening, which is misleading. Through a 75mm opening you can practically feed only a 50mm branch. Hansa inlet openings are much larger than the maximum recommended branch diameter.

Please contact us for details if you are looking for a larger or smaller model. Visit our website for our full product range and videos of the machines in action.
