

# Paddock Groomer

The **FAST, SIMPLE & AFFORDABLE** way to remove manure & smooth out **YOUR horse paddocks!**

**A Paddock Groomer is an essential piece of equipment for everyone who owns, trains, breeds or works with horses. Ideal for use on lifestyle blocks, horse training facilities and for any other horse owner who wants to keep their horse paddocks clean, healthy and tidy.**

Horse manure left to accumulate in paddocks turns pasture very sour, inviting weeds such as docks and buttercups, and is very detrimental to the health and wellbeing of horses due to the ongoing parasite cycle. Horses living in these conditions can quickly

become ill (including fatally) due to serious worm burdens while the pasture can also become very clumpy with uneven grass growth and will provide less and less quality and value as a food source.

The Paddock Groomer is an effective, simple and affordable manure collector machine for horse owners that will enable you to collect and remove horse manure from your horse paddocks, helping to keep your horses healthier and your pastures cleaner and smoother.

To use, you first need to adjust the underneath pin height adjustment to best suit your particular towing vehicle. Then simply connect the Paddock Groomer to your towing vehicle, drive to your horse paddock, wind the handle down to lower the brushes

to the correct height for collection, then drive around your paddock over top of any horse poo and debris you wish to collect. When the tray is full, slide it out the back and empty the contents wherever you wish. Once finished cleaning your paddock, wind the handle back up to lift the brushes off the ground (so you are not continuing to sweep on your way back to parking area) and unhook your Paddock Groomer from the towing vehicle - it's that simple!

**Now you see it... now you don't!**

## Benefits of the Paddock Groomer

### No Motor = No Additional Fuel Costs and Safety!

- The Paddock Groomer is chain driven not motor operated. This means there are no additional fuel costs and very little noise produced by the Paddock Groomer compared to most other manure collectors which have their own engine, so it can be used in amongst your horses while they are still in the paddock once they are familiar with seeing it. It also means it is very safe to use because when the Paddock Groomer is stationary,

there are no moving parts.

### Smoother "Groomed" Paddocks

- As the name suggests, as well as collecting horse manure, the Paddock Groomer also removes debris from your paddocks such as leaves, small stones, grass debris and rubbish (the Paddock Groomer can pick up cans, paper coffee cups, empty chip bags etc) simply by driving over them while it also helps to smooth over loose dirt clods which are commonly formed in horse paddocks,

greatly improving the appearance and functionality of the paddock. Weeds such as docks and buttercup (common in horse paddocks) do not like being run over by the Paddock Groomer which will often damage or break and collect the tops off them helping to delay their growth.

### Strong Yet Simple Construction

- the entire body and collection tray of the Paddock Groomer is made of very strong, durable, weather resistant plastic which will not rust or rot and is very robust for use in all outdoor and farm type settings. Quality stainless steel tow bar and fittings, combined with industrial standard road sweeper brushes mean your Paddock Groomer requires very little maintenance or care apart from washing down with water on occasion to keep the

chain drive, collection tray and brushes clean and debris free for optimal performance. Due to its relatively light weight construction, combined with simple spring mechanism and height adjustments, the Paddock Groomer is easily towed by your quad bike and can be used on hills or undulating ground conditions as well as flat paddocks. Whatever your paddock terrain, if you can drive there safely, the Paddock Groomer will follow

!

### Dump the Contents of the Collection Tray Anywhere!

- Another point of difference with the Paddock Groomer compared to many other manure collectors is that manure and debris is collected into a removeable tray - very similar to a lawn-mower catcher - which means you can remove and empty the tray along fencelines, onto a manure heap, into tree surrounds, into bags, onto the back of your ute to take it away or wherever you wish instead of just being dumped on the

spot like most other collectors.

**New Zealand Made** - Should anything happen to your Paddock Groomer requiring maintenance or repairs, all parts and product manufacture are New Zealand based and can be readily acquired via your Paddock Groomer agent..

**and last but certainly not least..**

- **Very Affordable!** The Paddock Groomer is one of the most affordable horse manure collectors currently available on the New Zealand market
