

Brush Chipper Model C4

MADE IN
NEW ZEALAND

The Hansa Model C4 is an essential tool for the keen gardener, useful all year round as you do your winter pruning, spring cleanup, or trimming back in summer.

If you own a domestic property with trees, flowers or a vegetable garden you will find the Hansa C4 an ideal sized, compact – but powerful, chipper shredder with amazing capability. The cantilever rotor design allows stringy materials such as flax and cabbage tree leaves to be processed, without running the risk of wrapping around a shaft.

FEATURES

- One in feed chute with large opening at a convenient operating height
- Quality engine – Honda 4 stroke petrol, GX160
- Capacity of 40mm branch diameter
- Easy starting
- Discharge out the side (300mm high) directly back onto your garden or stockpile
- Easy access to cutting blade – remove four bolts and everything is accessible
- Easy to transport, well balanced on large solid rubber wheels
- Solid housing construction of 3mm steel plate
- Quality hyperloc powder-coated finish
- Optional bag for discharge
- 12 month warranty, conditions apply

The best chippers for any application.

CHIPPERS

Brush Chipper Model C4

The Hansa Brush Chipper Model C4 will process all your unwanted garden refuse, such as prunings, stalks, vines, weeds, roots, vegetable matter and kitchen waste into natural compost and/or free mulch.

The output is of fine and even texture. Branches are chipped into 6 - 10mm particle size, optional bag to contain discharged mulch.

Recycle your waste and return it to your garden as rich organic fertilizer.

Discharge to the side, directly back onto your garden, no screen to cause blockages.

Model C4 in action, one in-feed chute - will handle flax and cabbage tree leaves.

Quality Honda GX160 engine, easy starting, belt driven.

Typical output size.

CONSTRUCTION

- Housing built of solid 3mm steel plate.
- Single belt drive between engine and rotor for smooth running and protection of your engine against shock loads.
- The cutting blade shears the material against an adjustable hardened counterknife, or anvil.
- This action will work just as efficiently in 10 years time as on the first day, provided the blade is kept sharp.
- No plastic components, built to last – simply the strongest.

SPECIFICATIONS	Weight (kg)	Height (mm)	Width (mm)	Length (mm)	Approx. Capacity*
5HP (max) Honda engine	50	1050	500	900	40mm branches

* depending on the type and hardness of the wood

When you compare different makes of machines, be aware, as some manufacturers rate their capacity by the size of the opening, which is misleading. Through a 40mm opening you can practically feed only a 20mm branch. Hansa inlet openings are much larger than the maximum recommended branch diameter.

Please contact us for details if you are looking for a larger or smaller model. Visit our website for our full product range and videos of the machines in action.
